

DX50 SCALE SOFTWARE

Improve operations efficiency and employee productivity with Hobart scale configuration software.

The scales are made to be accurate.
The software simply enhances their functionality.

- > > > Adding logos, changing prices, updating ingredients—using a scale has gotten a lot more versatile than just simply weighing product. That’s why we offer software that helps keep these added functions as easy to use as the scale itself.

- > The operator can create and edit PLU files, including all text, bar codes and pricing.

Software is supposed to enhance operations while keeping things simple. DX50 scale configuration tool software actually does. DX50 is designed to fit right into your operation. It runs on a Windows® operating system, compatible with most industry-standard computers. A user-friendly toolbar, drop-down menus and a simple, logical structure make operating the software intuitive—no lengthy training required. Picture icons allow for easy navigation of your most-used functions.

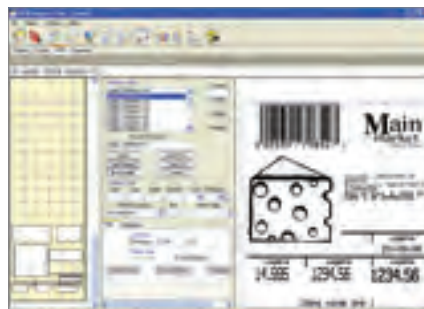

As quickly as prices change, so can your scale. With easy product file creation and editing, DX50 software lets you update your scales quickly, including price changes. You can create and edit product information and links to all other scale-related data such as label formats and bar codes.

DX50 lets you conveniently send and organize data and graphic files:

- Send and receive complete system or individual PLU, label formats, keyboard layout
- Update graphics to reflect seasonal changes or special events
- Print product file lists
- Merge PLU files together
- Create categories and subcategories

Label design, formatting and previewing are just as simple. You can design and format labels on-screen with simple drag-and-drop functions, and view true “scale fonts” in preview—what you see will be what you get.

- > A graphic label editor allows the operator to easily create and edit custom labels and update the scale.

Labels contain a lot of information.
DX50 software makes it easy to organize and share.

Crucial label information can be stored and shared simply with DX50 software.

Files are stored on a PC to make it easy for you to back up and restore scale data.

Information can be transferred via a USB Flash drive or sent to your network of scales through an Ethernet connection.

Networked scales are a snap to update—DX50 lets you view any of your SD scales from any location, configure the SD and run diagnostics. You can control your SD scales in-store or remotely via a modem, and update software with automated procedures even when you're not present. Network capabilities also let you:

- View graphical, full diagnostics of printer temperature/resistance and label photo-eye
- View by file type to check the versions of data files
- Change scale configuration on the fly
- Keep and use files as a master configuration for other networks

DX50 System Requirements:

- Operating system: Windows 2000, XP or Vista
- Minimum 10Mb free disk space
- CD-ROM drive needed for installation

DX50 Communication Requirements:

- Local store: Ethernet network card must be installed and configured on the PC
- Remote store: TCP/IP Ethernet interface required

> Hobart SD Scale

> Remotely configure or diagnose any scale on the network.

> An automated upgrade feature allows unattended software updates.

Food retail's #1 supporter. Hobart, where equipment and service join together in support of you. Hobart makes a full line of equipment for the food retail industry, including cooking, weigh wrap, food machines, warewashers and Traulsen refrigeration. We support our customers when and where it counts the most. In the field, at your place. With nearly 200 locations and 1,700 factory-trained service representatives across the country, we're always close by to install, maintain and service your equipment. If that's the kind of support network you've been looking for, contact your Hobart representative today by calling 888-4HOBART.
