

MOVING FORWARD BY MOVING IN REVERSE

RPI'S Olympus VI Air-Screen and the
Future of Refrigerated Grab & Go Technology

The Olympus VI Raising the bar once again with optional CoilClean Technology

Features:

- 4000k LED Lighting
- Powder Coat Interior Finish
- 4-16 Gauge Powder Coat Shelves
- Hot Gas Defrost
- Zero Clearance Install
- Service-Friendly Design

How CoilClean Works:

- High efficiency, variable speed and REVERSIBLE DIRECTION ECM fans are mounted to the condenser
- Fans run at 1,400 RPM when the unit goes into defrost and detects a reduction in air flow across the cells
- Air is pushed back through the coil to dislodge particles
- Air is then forced forward through the coil, clearing debris
